

# Order Yo Pins

[Lesson Notes](#)[Support](#)[Complete & Continue](#)

Let's reorder the pins on the index page so that they show up reverse-chronologically. We'll also explore other Active Record queries.

## 1. Learn some Active Record queries

[http://guides.rubyonrails.org/active\\_record\\_querying.html](http://guides.rubyonrails.org/active_record_querying.html) ([http://guides.rubyonrails.org/active\\_record\\_querying.html](http://guides.rubyonrails.org/active_record_querying.html))

## 2. Update Pins Controller

*app/controllers/pins\_controller.rb*

```
..  
  def index  
    @pins = Pin.all.order("created_at DESC")  
  end  
..
```

## 3. Commit to Git

```
$ git add .  
$ git commit -am "Load pins in index action in reverse chronological order"
```
